

Chemigation

WaterSOLV™ FS-1 CHEMIGATION FLOW SWITCH

We went to the edge of the world and back to create a chemigation system that was simple, reliable, serviceable locally, and supported on-demand!

One FS-1 Switch Box per pump station, simply reads flow from your existing pump station flow meter, relaying the pulses (analog or digital) to up to three chemical injection pumps (HCT's WaterSOLV™ Curative, WaterSOLV™ BC and your liquid fertilizer). All packaged goods chemistry, no bulk delivery necessary, 1/9th the chemical volume, sustainable, better results for less money.

The FS-1 has a Touch Pad Controller to synchronize the pump station flow with the pumps. One size fit all, operates even over three standard chemigation pumps. No monthly fees or regular service necessities. Chemistry applied and user adjusted based on linear agronomical needs of water and soil analyses.

Plants need a healthy drink when they need it, not when we choose to provide it to them. Available hydration, nutrition, oxygen on demand, by continuous chemigation with HCT's Sustainable Solutions.

One FS-1 Switch Box and two chemical feed pumps, under \$7,500.00.

One FS-1 Switch Box and three chemical feed pumps, under \$9,400.00.
