

### Analytical Analyses, Guidelines, Interpretations and Recommendations

#### A la Carte Tests:

- Water
- Water Bacteria (a Legacy Method)
- Available Soil Nutrition (a Legacy Method)
- Total Soil Digestion (a Legacy Method)

Interpretations and Recommendation: Proprietary HCT/WaterSOLV™  
Techniques including biology, pore space, infiltration rates, moisture retention and toxins.

Each test includes “Guidance”, how to accurately take water and soil samples meeting your conditions.

**The Online Process:** Online ordering and payment > emailed Receipt > Download Guidelines > Take samples based on guidelines, unique to your conditions > Complete sample descriptions > package sample, receipt and descriptions, ship to the lab > Await results in 7-10 days.

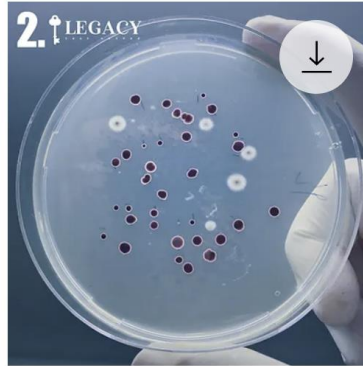

**Dealers:** Dealers enter their unique promotion code to receive dealers’ discount.

**What are the Legacy Testing Methods?** 1. Incorporating the bacteria and their food source loading impact to the soil health. 2. Available Soil Nutrition are matured techniques of the methods used including actual treated site water, ratio of soil to water and soak time, which leads to much more accurate results of available nutrition, toxins, and actual necessities 3. Matured techniques to identify what is in the soil in totality versus “exchangeable”, to harvest accumulated nutrition, restore soil health and porosity, identify the actual necessities of soil nutritional reserves and needs.

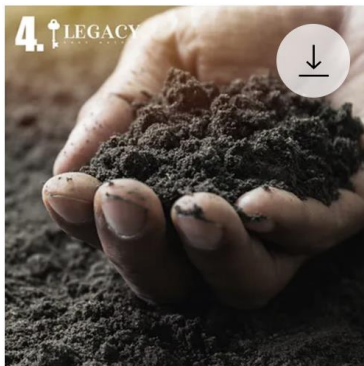

**Irrigation Water Analysis**

**Irrigation Water Bac T Analysis**

**Available Soil Nutrition Analysis**

**Total Soil Digestion**

**Interpretations and Recommendations**

**Vegetation Vitality** depends on you, providing;

1. Pore Space, Infiltration Rate, Moisture Penetration & Retention
2. Available Nutrition
3. H<sub>2</sub>O, Oxygen (water can turn septic)
4. Sodium & Chloride Detoxification
5. Remediation of Iron Bacteria bio-films
6. Remediation of Black Layer exudates including toxins
7. Pest and disease protection
